

petaFLOP Supercomputers

Why in News?

India is set to introduce 18 new **petaFLOP supercomputers** dedicated to weather forecasting, aiming to enhance the accuracy and resolution of weather predictions.

- These state-of-the-art machines will significantly **improve forecasting capabilities** at the block level, **predict cyclones with greater accuracy and lead time**, and provide detailed **ocean state forecasts**.

What are FLOPs in computing?

- **About:**
 - **FLOPs, or Floating-Point Operations per Second**, is a **metric** used to measure **computational performance and efficiency** in high-performance computing (HPC) and artificial intelligence (AI).
 - Floating-point operations involve mathematical calculations with real numbers that have fractional parts.
 - Using floating-point encoding, extremely long numbers can be handled relatively easily.
- **Significance:**
 - FLOPs are not the sole metric to evaluate a computer's performance. Factors like **memory bandwidth, latency, and architectural features also contribute**.
 - However, FLOPs provide a baseline for comparing computational capabilities, particularly in **tasks dominated by floating-point calculations**.
- **Unit of Computing Speed:**
 - **Teraflops:**
 - It is a unit of computing speed equal to **one million million (1 trillion) (10^{12}) FLOPS**.
 - **Petaflops:**
 - It is a unit of computing speed equal to **1000 TFLOPS (10^{15})**.
 - **Exaflops:**
 - It is a unit of computing speed equal to **one billion billion (10^{18}) FLOPS**.
- **India's Current Usage of petaFLOPs:**
 - The **National Centre for Medium-Range Weather Forecasting (NCMRWF)** houses '**Mihir**,' a **2.8 petaFLOP supercomputer**, while the **Indian Institute of Tropical Meteorology (IITM)** houses '**Pratyush**,' a **4.0 petaFLOP supercomputer**.
 - These existing supercomputers, launched in 2018, will be decommissioned once the new petaFLOP supercomputers are introduced.
 - As per the agreement, NCMRWF will receive eight PFLOPs of computing power, while the remaining ten PFLOPs will be allocated to IITM, catering to their specific weather forecasting requirements.
 - India's first supercomputer called **PARAM 8000 was launched in 1991**.

Note:

- The world's fastest computer in terms of PFLOPs is the **Hewlett Packard Enterprise Frontier, or OLCF-5** with the capability to touch a **peak performance of 1,685.65**.

- **Airawat PSAI stands as India's largest and fastest AI supercomputing system**, with a remarkable speed of 13,170 teraflops.
