

## Poverty and Inequality Measures in India

**Prelims:** [PM's Economic Advisory Council \(PMEAC\)](#), [Poverty Line](#), [World Bank](#), [VM Dandekar and N Rath](#), [Alagh Committee](#), [Lakdawala Committee](#), [Tendulkar Committee](#), [Rangarajan Committee](#), [Price Index of Industrial Workers \(CPI-IW\)](#), [Consumer Price Index of Agricultural Labour \(CPI-AL\)](#), [National Sample Survey \(NSS\)](#), [GST](#), [Multidimensional poverty Index](#), [Inflation](#), [Gini coefficient](#), [Household Consumption Expenditure Survey](#).

**Mains:** Issues Related to Poverty Estimation and Status of Inequality in India

[Source: TH](#)

### Why in News?

Recently, [PM's Economic Advisory Council \(PMEAC\)](#) chief Bibek Debroy pitched for a review of India's official [poverty line](#) and suggested analysing inequality at the state level.

### What is the Status of Poverty in India?

#### ▪ About:

- Poverty refers to a condition in which people or communities lack the financial resources and other essentials for a **minimum standard of living**.
- In September 2022, the [World Bank](#) set the International Poverty line at **USD 2.15** using **2017 prices**.
  - It means that anyone living on less than **USD 2.15** a day is considered to be living in **extreme poverty**.

#### ▪ Poverty Estimation in India:

- **Study by VM Dandekar and N Rath (1971):** It made the first systematic assessment of poverty in India.
  - It was based on [National Sample Survey \(NSS\)](#) data from 1960-61.
  - They argued that the **poverty line** must be derived from the expenditure that was adequate to provide **2250 calories per day** in both rural and urban areas.
- **Alagh Committee (1979):** It constructed a poverty line for rural and urban areas on the basis of **nutritional requirements**.
  - Nutritional requirements and related consumption expenditure based on 1973-74 price levels recommended were **2400 Calories for rural** areas (Rs 49.1 per capita per month) and **2100 Calories for urban** areas (Rs 56.7 per capita per month).
- **Lakdawala Committee (1993):** It made the following suggestions:
  - Consumption expenditure should be calculated based on **calorie consumption** as earlier.
  - **State specific poverty lines** should be constructed and these should be **updated** using the Consumer [Price Index of Industrial Workers \(CPI-IW\)](#) in

- **urban** areas and [Consumer Price Index of Agricultural Labour \(CPI-AL\)](#) in rural areas.
- **Tendulkar Committee (2005):** It was set up by the [Planning Commission](#) to reassess the methods for estimating poverty and submitted its report in December 2009.
  - According to the report, the **rural poverty** headcount ratio for **2004-05** was at **41.8%**, **urban** at **25.7%**, and the **pan-India** poverty rate stood at **37.2%**.
- **Rangarajan Committee (2012):** It was chaired by former Reserve Bank of India governor **C. Rangarajan** to review the country's poverty measurement methodology.
  - It defined poverty as living on **less than Rs 47 per day in urban areas and Rs 32 per day in rural areas.**
  - It estimated that **poverty levels were 19% higher in rural areas and 41% higher in urban areas compared to the Tendulkar Committee's estimates.**

## What is the Need of a New Official Poverty Line in India?

- **Outdated Data:** India's poverty line estimate based on the Tendulkar Committee (2005) is two decades old.
  - Estimating poverty on the basis of this data is a futile exercise and this grossly underestimates poverty.
- **Inconsistent with Global Data:**
  - The **World Bank's** 2022 report says, India saw "an increase of **56 million poor people**" in 2020 (at USD 2.15) due to the [pandemic](#).
  - **Pew Research Institute's** March 2021 report said the number of Indian poor increased by **75 million** and added that its middle class shrinking by 32 million.
  - But India **never acknowledged** that poverty increased due to the pandemic or due to **pre-pandemic** economic shocks of [demonetisation](#) of 2016 and [GST](#) of 2017.
- **Less Realistic Data:**
  - The poverty threshold varies from state to state according to people's social and economic conditions but the current poverty estimation is based on rural, urban and pan-India level.
    - This data is **less realistic** due to **inadequate** customised measurement and **inconsistent** data collection methods.
- **Accuracy Issues:**
  - There is a lack of comprehensive **consumption** and [inflation](#) data making it impossible to get an accurate picture.
    - Indian authorities do not provide inflation data segmented by household income.
  - [Multidimensional poverty Index \(MDPI\)](#) evaluates **health, education** and **standard of living** across 12 indicators. It relies more on **survey-based data** rather than **actual consumption** metrics.
- **Institutional Issues:**
  - India's statistical system, **which was applauded globally in the early 1950s**, had been criticised by people outside as well as inside the government system in recent times.
  - The [Ministry of Statistics and Programme Implementation](#) has **failed** to provide **empirical data** and struggled to **effectively communicate its actions** to the relevant stakeholders.
    - **Example:** The findings of the [Consumption Expenditure Survey 2017-18](#) were so abysmal that they were withdrawn by the government.

## Government Initiatives to Alleviate Poverty

- [Prime Minister Street Vendor's AtmaNirbhar Nidhi – PM SVanidhi](#)

- [Pradhan Mantri Shram Yogi Maan-Dhan \(PM-SYM\)](#)
- [National Nutrition Mission \(NNM\)](#)
- [Pradhan Mantri Garib Kalyan Yojana \(PMGKY\)](#)
- [Pradhan Mantri Suraksha Bima Yojana](#)

## What is the Status of Inequality in India?

- **About:**
  - In the economy, inequality is the **unequal distribution of income and opportunity** between different groups in society.
  - Income Inequality refers to the **extent to which income is evenly distributed** within a population.
- **Inequality Estimation in India:**
  - **Ways to measure inequality:**
    - The **Gini coefficient** (Gini index or Gini ratio) is a measure of income inequality, wealth inequality, or consumption inequality within a nation or a social group.
      - A Gini index of **0 represents perfect equality, while an index of 1 implies perfect inequality.**
  - **Inequality in India:**
    - As per the [Household Consumption Expenditure Survey 2022-23](#), the value of the Gini coefficient for consumption expenditure decreased from 0.283 in 2011-12 to 0.266 for rural areas, and from 0.363 to 0.314 for urban areas in 2022-23.

## Is a low Gini coefficient Good?

- Generally, **developed countries** tend to have **lower Gini coefficients** (e.g., below 0.30), indicating relatively **lower income or wealth inequality**.
- The Gini Coefficient of **developing countries** like India tends to be higher. As **economies grow and prosper, inequalities widen a bit.**

## Kuznets curve

- The **Kuznets curve** is a **graphical representation** of the relationship between **economic development** and **income inequality**.
- It suggests that as an economy develops from a **low-income** agrarian society to a **higher-income** industrial and then **post-industrial** society, income inequality follows a **specific pattern**.
- The Kuznets curve is often depicted as an **inverted U-shaped curve**.
- **Specific pattern of income inequality:**
  - **Low-Income Stage (Agrarian Economy):** At the initial stage of economic development, when a society is **primarily agrarian, income inequality tends to be relatively low.**
  - **High-Income Stage (Industrialization):** **As the economy develops and transitions into an industrial phase, income inequality rises during this phase.**
  - **High-Income Stage (Post-Industrial):** In post-industrial societies, there is more emphasis on service industries, education, and technology where income inequality is expected to decline.

## Way Forward

- **Institutional Reforms:**
  - **Develop a Communication Strategy:** Create a comprehensive communication plan to regularly update stakeholders and the public about MoSPI's activities, methodologies, and data.
  - **Relevant Data: Conduct periodic reviews of data collection** methods to ensure they are up-to-date and relevant to current needs.
  - **Emerging Issues:** Expand data collection to **cover emerging issues such as digital economy metrics, environmental statistics,** and social welfare indicators.
- **Align with Global Practices:**
  - **Consultative Committees:** Form consultative committees with representatives from academia, industry, and civil society to provide feedback and guidance on statistical methods and data dissemination.
  - **Public Feedback Mechanisms:** Implement mechanisms for **public feedback on MoSPI's publications and activities to ensure continuous improvement.**

## Conclusion

**Poverty** and **inequality** are deeply **interconnected** issues that affect societies worldwide, hindering social and economic progress. Addressing these challenges requires a **multifaceted approach** that includes **equitable** economic policies, access to quality education, healthcare, and social protection. India needs to address data uncertainties by establishing a more accurate and reliable measure of the poverty line and the number of people living in poverty. A revamping of poverty data for equitable distribution of income will be a step in the right direction.

### Q. Drishti Mains Question:

What are the issues involved in estimation of poverty in India? What need to be done for wider acceptance of Indian statistical data?

**UPSC Civil Services Examination, Previous Year Question (PYQ)**

**Prelims**

**Q. Increase in absolute and per capita real GNP do not connote a higher level of economic development, if (2018)**

- (a) industrial output fails to keep pace with agricultural output.
- (b) agricultural output fails to keep pace with industrial output.
- (c) poverty and unemployment increase.
- (d) imports grow faster than exports.

**Ans (c)**

**Q. In a given year in India, official poverty lines are higher in some States than in others because (2019)**

- (a) poverty rates vary from State to State
- (b) price levels vary from State to State
- (c) Gross State Product varies from State to State
- (d) quality of public distribution varies from State to State

**Ans (b)**

**Q. The Multi-dimensional Poverty Index developed by Oxford Poverty and Human Development Initiative with UNDP support covers which of the following?(2012)**

1. Deprivation of education, health, assets and services at household level
2. Purchasing power parity at national level
3. Extent of budget deficit and GDP growth rate at national level

**Select the correct answer using the codes given below:**

- (a) 1 only
- (b) 2 and 3 only
- (c) 1 and 3 only
- (d) 1, 2 and 3

**Ans (a)**

---

### **Mains**

**Q. Though there have been several different estimates of poverty in India, all indicate reduction in poverty levels over time. Do you agree? Critically examine with reference to urban and rural poverty indicators (2015)**
